GENERAL SPECIFICATIONS

- Maximum Particulate Concentration: 20% wt.
- Maximum Particulate Size: $\frac{1}{4}$ inch (6.4 mm) diameter

Note: Maximum Particulate Concentration and Size given above is an approximate number and should be used a guideline. Please contact Sundyne Application Engineering if actual particulate concentration or size exceeds these figures.

- Maximum viscosity: 900 SSU (200 centistokes)

Note: Maximum viscosity given above is an approximate number. Pump performance (flow, head and efficiency) will be greatly affected by the viscosity of liquid pumped. Please refer to the ANSI/HI 9.6.7 “Viscosity Correction” chart to calculate actual performance. A pump should not be used, or should be used with caution, if efficiency with viscous liquid is less than 50% of efficiency with water.
